To future users of SMP:

I have been using SMP and it's previous versions back to the days of DOS about ten years. I like the ability to get all sorts of reports especially the tax reports for filing state tax returns as I have to file with two states. Inventory control works great and the quote process turns out a great looking quote. The customer data base is great for being able to look back to check on work that was preformed in the past. There are so many benefits that I can't mention them all.

The tech support staff is tops in the field. No matter what I happen to find that doesn't work like I think it should, they help me find the problem quickly. I have seen this product evolve from DOS to the current Windows version. As with any upgrade and extensive testing before release, someone will use it in another way that missed the testing, and the support staff gets it resolved quickly.

I feel that you will enjoy the software as much as I do, so give it a try.
